Installation instructions

Note: It is important to ensure that network cable and equipment is totally inoperative during transceiver installation.

Transceiver connection
Connect the transceiver AUI interface to the workstation or local PC. Connect the BNC socket on the transceiver to the Thin-Ethernet trunk line via the BNC adaptor supplied or see RS catalogue for Safernet adaptors.

SQE (Signal Quality Error)
Ensure the SQE is set as required. A slide switch on the side of the transceiver can be operated to set SQE on or off. In most circumstances SQE is set off.
