

# ADJUSTABLE PRECISION ZENER SHUNT REGULATOR

ISSUE 5 – DECEMBER 2002

ZR431

## DEVICE DESCRIPTION

The ZR431 is a three terminal adjustable shunt regulator offering excellent temperature stability and output current handling capability up to 100mA. The output voltage may be set to any chosen voltage between 2.5 and 20 volts by selection of two external divider resistors.

The devices can be used as a replacement for zener diodes in many applications requiring an improvement in zener performance.

## FEATURES

- Surface mount SOT223 and SOT23 packages
- TO92 package
- 2%, 1 % and 0.5% tolerance
- Max. temperature coefficient 55 ppm/°C
- Temperature compensated for operation over the full temperature range
- Programmable output voltage
- 50µA to 100mA current sink capability
- Low output noise

## APPLICATIONS

- Shunt regulator
- Series regulator
- Voltage monitor
- Over voltage/ under voltage protection
- Switch mode power supplies

## NOTES

Deviation of reference input voltage,  $V_{dev}$ , is defined as the maximum variation of the reference input voltage over the full temperature range.

The average temperature coefficient of the reference input voltage,  $V_{ref}$  is defined as:

$$V_{ref} (ppm/^{\circ}C) = \frac{V_{dev} \times 1000000}{V_{ref} (T1 - T2)}$$

The dynamic output impedance,  $R_z$ , is defined as:

$$R_z = \frac{\Delta V_z}{\Delta I_z}$$

When the device is programmed with two external resistors,  $R_1$  and  $R_2$ , (fig 2), the dynamic output impedance of the overall circuit,  $R'$ , is defined as:

$$R' = R_z \left(1 + \frac{R_1}{R_2}\right)$$
