1. About this document

1.1 Function
This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety switchgear. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

1.2 Target group: authorised qualified personnel
All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.3 Explanation of the symbols used

Information, hint, note:
This symbol is used for identifying useful additional information.

Caution: Failure to comply with this warning notice could lead to failures or malfunctions.
Warning: Failure to comply with this warning notice could lead to physical injury and/or damage to the machine.

1.4 Appropriate use
The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machinery or plant.

The safety switchgear must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

1.5 General safety instructions
The user must observe the safety instructions in this operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.6 Warning about misuse
The instruction in the vicinity of the device.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications.

If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstances. The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.
1.6 Warning about misuse

In case of inadequate or improper use or manipulations of the safety switchgear, personal hazards or damage to machinery or plant components cannot be excluded. The relevant requirements of the standard EN 1088 must be observed.

1.7 Exclusion of liability

We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden; the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

2. Product description

2.1 Ordering code

This operating instructions manual applies to the following types:

EX-AZM 161➀-12/12-2K❼-024-3D

No. Option Description
➀ SK Screw connection
❼ CC Cage clamps
R Latching force 5 N
❼ A Latching force 30 N
➀ Power to unlock
➀ Power to lock

Only if the information described in this operating instructions manual are realised correctly, the safety function and therefore the compliance with the Machinery Directive and the Explosion Protection Directive is maintained.

2.2 Special versions

For special versions, which are not listed in the order code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

2.3 Destination and use

The solenoid interlock has been designed to prevent in conjunction with the control part of a machine, movable safety guards from being opened before hazardous conditions have been eliminated. The components can be used in explosion-endangered areas of Zone 22 equipment category 3D. The installation and maintenance requirements to the standard series EN 60079 must be met.

Interlocks with the power to lock principle may only be used in special cases after a thorough evaluation of the accident risk, since the guarding device can immediately be opened on failure of the electrical power supply or when the main switch is opened.

Manual release (for set-up, maintenance, etc.)

The manual release is realised by turning the triangular key (M5 triangular key available as accessory), so that the locking bolt is pulled into the unlocking position. The normal locking function is only restored after the triangular key has been returned to its original position. After being put into operation, the manual release must be secured by installing the plastic cover, which is included in delivery.

Manual release

Conditions for safe operation

Due to the specific impact energy, the components must be fitted with a protection against mechanical stresses. The specific ambient temperature range must be observed. The user must provide for a protection against the permanent influence of UV rays.

The user must evaluate and design the safety chain in accordance with the relevant standards and the required safety level.

2.4 Technical data

Equipment category: ☑ II 3D
Ex protection: Ex t IIIC T80°C Dc X
Standards:
EN 60947-5-1, EN 60079-0,
EN 60079-31, BG-GS-ET-19

Enclosure: glass-fibre reinforced thermoplastic, self-extinguishing

Protective enclosure (option): Metal, coated
Actuator and locking bolt: stainless steel 1.4301
Max. impact energy: without mechanical protective enclosure: 1 J
with mechanical enclosure: 7 J
Actuating speed: max. 1 ms
Protection class: IP67
Contact material: Silver
Contact type: Change-over with double break Zb, galvanically separated contact bridges

Switching system: ☑ EN 60947-5-1, slow action, NC contact with positive break
Connection: screw terminals or cage clamps
Cable section: max. 1.5 mm² (incl. conductor ferrules)
Cable entry: 4 x M16 x 1.5
Rated impulse withstand voltage Uimp: 4 kV
Rated insulation voltage Ue: 250 V
Thermal test current Ith max. 5 A
Utilisation category: AC-15 / DC-13
Rated operating current/voltage Ie/Ue: 4 A / 230 VAC; 2.5 A / 24 VDC
Max. fuse rating: 6 A gG D-fuse
Required short-circuit current: 1000 A
Positive break travel: 9.5 mm
Positive break force: 10 N for each NC contact fitted
Rated control voltage Ue: 24 VAC/DC
Magnet: 100% ED
Power consumption: max. 10 W
Ambient temperature: −10 °C ... +50 °C
Mechanical life: max. 1 million operations
Clamping force Fmax: 2000 N
Latching force: 30 N for ordering suffix R

Tightening torque: cover screws: min. 0.6 Nm
Cable gland / locking screws: 3 Nm
cable gland: ☑ II 2GD
Cable cross-section: min. Ø 5 mm; max. Ø 10 mm

Cable cross-section: 4 x M16 x 1.5
Cable gland / locking screws: 3 Nm
Cable gland: ☑ II 2GD

Cable cross-section: min. Ø 5 mm; max. Ø 10 mm
2.5 Safety classification

Standards: EN ISO 13849-1

$B_{\text{ca}}$ (NC contact): 2,000,000

Service life: 20 years

$$\text{MTTF}_{\text{D}} = \frac{B_{\text{ca}}}{0,1 \times n_{\text{op}}} \times \frac{d_{\text{op}} \times h_{\text{op}} \times 3600 \text{ s/h}}{t_{\text{cycle}}}$$

(Specifications can vary depending on the application-specific parameters $h_{\text{op}}$, $d_{\text{op}}$, and $t_{\text{cycle}}$ as well as the load.)

3. Mounting

3.1 General mounting instructions

⚠️ Fitting is only authorised in a de-energised condition.

The enclosure can be fixed by means of 3 mounting holes. The solenoid interlock is double insulated. The use of an earth wire is not authorised. The enclosure must not be used as an end stop. Any mounting position. The mounting position however must be chosen so that the ingress of dirt and soiling in the used opening is avoided. The unused openings must be sealed by means of slot sealing plugs after fitting.

Mounting of the actuators: See mounting instructions actuators.

Please observe the remarks of the standards EN ISO 12100, EN 953 and EN 1088.

3.2 Dimensions

All measurements in mm.

**Solenoid interlock**

- 20
- 32
- 72
- 10
- 6

**Solenoid interlock with protective enclosure**

- 6,5
- 8,5
- 23
- 278
- 105
- 26
- 10

The component must be mechanically protected. In order to provide for an increased mechanical protection, the solenoid interlock can be fitted with an additional protective enclosure (available as accessory).

Fitting of the additional mechanical protective enclosure

- Fit the base plate
- Fix the solenoid interlock
- Fix the protective cover by means of 2 screws
4. Electrical connection

4.1 General information for electrical connection

The electrical connection may only be carried out by authorised personnel in a de-energised condition.

The contact labelling can be found in the wiring compartment of the switch.

At least one magnetic contact with positive break contacts must be integrated in the safety circuit.

Cable glands (included in delivery) are only authorised for permanent cables. The constructor must provide for the necessary strain relief. Unused cable entries must be sealed by means of locking screws (included in delivery). After wiring, the cover screws must be tightened uniformly in accordance with the technical data.

4.2 Contact variants

Contacts shown in a de-energised condition and with the actuator inserted.

Power to unlock

EX-AZM 161SK-12/12RK-3D
EX-AZM 161CC-12/12RK-3D

Legend:
- positive break
- actuated
- not actuated

Power to lock

EX-AZM 161SK-12/12RKA-3D
EX-AZM 161CC-12/12RKA-3D

Legend:
- positive break
= actuated
- not actuated

5. Set-up and maintenance

5.1 Functional testing

The installation, operation and maintenance must be executed by qualified professionals. The requirements to be met for the installation and the maintenance can be found in this operating instructions manual. Do not expose the device to mechanical and/or thermal loads or stresses, which exceed the limits specified in the operating instructions manual.

For the set-up and the operation of the safety switchgear, the applicable (also national) safety and accident prevention regulations as well as the generally acknowledged codes of practice of technology must be observed.

5.2 Maintenance

In case of correct installation in accordance with the above-described instructions, the component requires little maintenance. By use in extreme conditions, we recommend routine maintenance including the following steps:
1. Check the proper fixation of the actuator and the safety switchgear
2. Remove particles of dust and soiling
3. Check cable entry and connections in a de-energised condition

Caution: avoid electrostatic charging. Clean with damp cloth. Do not open the device when live.

Damaged or defective components must be replaced.

For explosion protection reasons, the component must be exchanged after max. 1 million operations.

6. Disassembly and disposal

6.1 Disassembly

The safety switchgear must be disassembled in a de-energised condition only.

6.2 Disposal

The safety switchgear must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.
7. Appendix

7.1 EC Declaration of conformity

EC Declaration of conformity

Translation of the original declaration of conformity K. A. Schmersal GmbH & Co. KG
Industrielle Sicherheitsschaltsysteme
Möddinghofe 30, 42279 Wuppertal
Germany
Internet: www.schmersal.com

We hereby certify that the hereafter described safety components both in its basic design and construction conform to the applicable European Directives.

Name of the safety component: EX-AZM 161

Description of the safety component: Interlocking device with electromagnetic interlock for safety functions

Relevant EC-Directives:
- 2006/42/EC-EC Machinery Directive
- 2004/108/EC EMC-Directive
- 94/9/EC EC-Explosion Protection Directive (ATEX)

Person authorized for the compilation of the technical documentation:
Oliver Wacker
Möddingohe 30
42279 Wuppertal

Place and date of issue: Wuppertal, September 17, 2012

Authorised signature

Philip Schmersal
Managing Director
