2-Color Display Type
High-Precision Digital Pressure Switch

Series ZSE30/ISE30

Improved, easy-to-read 2-color display
2-Color Display Type
High-Precision Digital Pressure Switch

Series ZSE30/ISE30

2-color digital display allows you to choose the setting according to your application requirements. 4 different display settings are available.

A normal conditions can be detected at a glance!
### Features 2

#### Space-saving improvement
Economical use of space

**Old Model**

Each display required its own panel opening.

**New Model**

Just one panel opening is required for stackable displays, which can be mounted either horizontally or vertically.

A applicable panel thickness is up to 6mm.

(Panel mounting)

With analog output

In addition to the conventional voltage output type (1 to 5V) Current output type (4 to 20mA) is now available.

- Convenient when longer wiring is required
- Excellent noise resistance

Switches for vacuum and positive pressure can be easily distinguished.

The different display panel frame colors easily tell them apart.

Vacuum/Low pressure (ZSE30)

- Blue

Positive pressure (ISE30)

- Gray

High-precision resolution: 1/1000

#### Display calibration

This function allows uniformity in the numbers displayed.

#### More user-friendly controls

- Raised rubber button controls are clearly set apart, simple to operate, soft to the touch.

- Plug-type connectors take the burden out of wiring work and maintenance.

Note 1) When switch output is selected, analog output is not available.
Note 2) When voltage output is selected, a simultaneous selection of switch output and current output is not available.
Note 3) When current output is selected, a simultaneous selection of switch output and voltage output is not available.
**Setting**

<table>
<thead>
<tr>
<th>Measuring mode</th>
<th>Initial setting</th>
<th>Pressure setting</th>
<th>Measuring mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press the <strong>SET</strong> button.</td>
<td>Press the <strong>SET</strong> button and hold for 2 sec. or longer.</td>
<td>Enter the set value of the pressure to perform switch output.</td>
<td>Detects and displays the pressure and performs switch operations. Other functions such as the value clear function can be set according to the application purpose.</td>
</tr>
</tbody>
</table>

### Initial Setting

**Initial setting mode**

Press and hold the SET button for 2 seconds or longer. Display monitor will be per Figure A below, and the switch will now be in the display color setting mode.

![Figure A](image)

If the unit specification indicated at the time of ordering is "M", the fixed SI unit will be used. If it is Nil, refer to "Unit Switching Function" on page 5.

#### 1. Display color setting

Select the color for LCD display. Press the △UP or ▽DOWN button to choose a display color.

<table>
<thead>
<tr>
<th>Color</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON: Red</td>
<td><img src="image" alt="Red" /></td>
</tr>
<tr>
<td>ON: Green</td>
<td><img src="image" alt="Green" /></td>
</tr>
<tr>
<td>ON/OFF: Red</td>
<td><img src="image" alt="Red" /></td>
</tr>
<tr>
<td>ON/OFF: Green</td>
<td><img src="image" alt="Green" /></td>
</tr>
</tbody>
</table>

Press the SET button to set the color and proceed to the operating mode setting.

If the analog output is set, press the △UP or ▽DOWN button and select the desired display color from 𝒈𝒓 (Green) or 𝒓𝐄 (Red). Press the SET button to exit this mode and return to the measuring mode.

#### 2. Operating mode setting

This mode will let you select the switch operating mode. While the current operating mode is displayed, press the △UP or ▽DOWN button to select a newly desired operating mode.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hysteresis mode</td>
<td><img src="image" alt="Hysteresis" /></td>
</tr>
<tr>
<td>Window comparator mode</td>
<td><img src="image" alt="Window comparator" /></td>
</tr>
</tbody>
</table>

Press the SET button to set the mode and proceed to the output type setting.

#### 3. Output type setting

The type of switch output can be set arbitrarily. While the current output type is displayed, press the ▽DOWN button to switch between normally open (NO) and normally closed (NC).

<table>
<thead>
<tr>
<th>Type</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normally open</td>
<td><img src="image" alt="Normal open" /></td>
</tr>
<tr>
<td>Normally closed</td>
<td><img src="image" alt="Normal closed" /></td>
</tr>
</tbody>
</table>

Press the SET button to set the output type and proceed to the response time setting.

#### 4. Response time setting

The switch output response time can be set arbitrarily. Chattering can be prevented with a response time setting. While the current response time is displayed, press the △UP or ▽DOWN button to select a new response time.

<table>
<thead>
<tr>
<th>Time</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.5ms</td>
<td><img src="image" alt="2.5ms" /></td>
</tr>
<tr>
<td>20ms</td>
<td><img src="image" alt="20ms" /></td>
</tr>
<tr>
<td>160ms</td>
<td><img src="image" alt="160ms" /></td>
</tr>
<tr>
<td>640ms</td>
<td><img src="image" alt="640ms" /></td>
</tr>
<tr>
<td>1280ms</td>
<td><img src="image" alt="1280ms" /></td>
</tr>
</tbody>
</table>

Press the SET button to set the response time and proceed to the auto preset setting.

If the operating mode is the window comparator mode, press the SET button to return to the measuring mode.

#### 5. Auto preset setting

This function stores the measuring pressure that is set during the auto preset mode as a basic value. While the current setting is displayed, press the △UP or ▽DOWN button to select it as an auto preset setting.

<table>
<thead>
<tr>
<th>Auto mode</th>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manual</td>
<td><img src="image" alt="Manual" /></td>
</tr>
<tr>
<td>Auto</td>
<td><img src="image" alt="Auto" /></td>
</tr>
</tbody>
</table>

Press the SET button to set the auto preset and return to the measuring mode.
Pressure setting

**Manual setting**
Press the SET button in the measuring mode to display the set value. $P_1$ and the current set value blink alternately.

![Pressure Setting Diagram](image)

1. Press the SET button to display the next set value. Press the UP or DOWN button to change the value. (Refer to “How to Set Value” on the lower right hand corner of this page.)

**Hysteresis mode**
In this mode, hysteresis (H) and the set value for hysteresis are displayed alternately after setting P1. Press the SET button to return to the normal measuring mode. Press the UP or DOWN button to change the value. (Refer to “How to Set Value” below right.)

**Window comparator mode**
In this mode, P2 and the current set value are displayed alternately after setting P1. Press the SET button to display the next set value ($\Delta$P: hysteresis). Press the UP or DOWN button to change the value. (Refer to “How to Set Value” at right.)

Next, $\Delta$P and the set value for hysteresis will be displayed alternately. Press the SET button to return to the normal measuring mode. Press the UP or DOWN button to change the value. (Refer to “How to Set Value” at right.)

Pressure set value can be verified without holding or stopping the switch output operation.

**Auto preset setting**

1. **Auto preset preparation mode**
While in the measuring mode, press the SET button to activate the auto preset preparation mode, and $\Delta$P $P_1$ will be displayed. Proceed to prepare the devices to perform the pressure setting. While $\Delta$P $P_1$ is still displayed, press both the UP and DOWN buttons simultaneously to return to the measuring mode.

2. **Auto preset setting**
Press the SET button to activate the mode to execute auto preset functions. When $\Delta$P $P_1$ is displayed, start the system operation and change the pressure. The set value will be automatically detected and stored.
While $\Delta$P $P_1$ is still displayed, press the SET button to complete the setting and return to the normal measuring mode.

**How to Set Value**
To enter a value such as the one for pressure setting:

1. Press the UP or DOWN button to change the set value. The first digit blinks.

2. Press the UP or DOWN button to set the value arbitrarily. (If there is no button operation for more than 10 seconds, the current value will be automatically set and the function will return to the set value display mode.)

3. With every push of the SET button, the next (higher) digit blinks.

4. Press and hold the SET button for 1 second or longer to return to the set value display mode.
**Function setting**

**Display calibration**

During measuring mode, press the SET and \(\triangle\) DOWN buttons simultaneously and hold for 2 seconds or longer. \(F_{SL}\) and current measured value will be displayed. Press the \(\triangle\) UP or \(\triangle\) DOWN button to change the set value. If there is no button operation for more than 2 seconds after changing the set value, the display mode returns to displaying \(F_{SL}\) and the current measured value.

Press the SET button to display the adjusted value (percent). The adjusted value and \(F_{SL}\) will be alternately displayed.

Press the SET button to return to the normal measuring mode.

**Key lock function**

This function prevents incorrect operations such as changing the set value accidentally. Press the SET button and hold for 4 seconds or longer to display the current \(Loc\) or \(UnL\) setting. Press the \(\triangle\) UP or \(\triangle\) DOWN button to select the setting and set this function with the SET button. Use the \(Loc\) mode to avoid accidental button operation. To release a key lock function, press the SET button and hold for 4 seconds or longer to display the current setting, and select the \(UnL\) mode.

**Zero out (Zero ADJ) function**

This function clears and resets the displayed value as long as the measuring pressure is within \(\pm 70\) digits of the atmospheric pressure. (Due to individual product differences, the setting range varies \(\pm 10\%\) F.S.) This function is effective in detecting pressure fluctuations that exceed a certain amount without being affected by the supply pressure. Press and hold the \(\triangle\) UP and \(\triangle\) DOWN buttons simultaneously to reset the display. Release the buttons to return to the measuring mode.

**Unit Conversion Function**

When not selecting “M” for unit specification

Desired display unit can be selected.

Press the \(\triangle\) UP or \(\triangle\) DOWN button to switch the unit, and the set value is automatically converted. The conversion order is: Pa⇔gf/cm\(^2\)⇔bar⇔psi⇔inchHg⇔mmHg

Press the SET button to set the unit and proceed to the display color setting.

For vacuum/low pressure \(Pa\)⇔kgf/cm\(^2\)⇔bar⇔psi⇔inchHg⇔mmHg

For positive pressure \(MPa\)⇔kgf/cm\(^2\)⇔bar⇔psi

**Indication of units**

</tbody>
</table>

LCD Display
Displays the current pressure condition, setting mode conditions, selected display unit, and error codes. A display color type can be selected from either a single color display with red or green, or 2-color display in which green and red are switched according to the output.

\(\text{\uparrow\text{UP button}}\)
Use this button to change the mode or increase the ON/OFF set value. It also allows you to switch to the peak value display mode.

\(\text{\downarrow\text{DOWN button}}\)
Use this button to change the mode or decrease the ON/OFF set value. It also allows you to switch to the bottom value display mode.

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by a label of "Caution", "Warning", or "Danger". To ensure safety, be sure to observe ISO 4414 Note 1), JIS B 8370 Note 2) and other safety practices.

⚠️ Caution : Operator error could result in injury or equipment damage.

⚠️ Warning : Operator error could result in serious injury or loss of life.

⚠️ Danger : In extreme conditions, there is a possible result of serious injury or loss of life.

---

**Warning**

1. The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications. Since the products specified here are used in various operating conditions, their compatibility with the specific pneumatic system must be based on specifications or after analysis and/or tests to meet your specific requirements.

2. Only trained personnel should operate pneumatically operated machinery and equipment. Compressed air can be dangerous if handled incorrectly. Assembly, handling or maintenance of pneumatic systems should be performed by trained and experienced operators.

3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.
   1. Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe locked-out control positions.
   2. When equipment is to be removed, confirm the safety process as mentioned above. Cut the supply pressure for this equipment and exhaust all residual compressed air in the system.
   3. Before machinery/equipment is restarted, take measures to prevent shooting-out of cylinder piston rod, etc. (Bleed air into the system gradually to create back pressure.)

4. Contact SMC if the product is to be used in any of the following conditions:
   1. Conditions and environments beyond the given specifications, or if product is used outdoors.
   2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, press applications, or safety equipment.
   3. An application which has the possibility of having negative effects on people, property, or animals, and therefore requires special safety analysis.
### Design and Selection

#### Warning
1. **Operate the switch only within the specified voltage.**
   
   Use of the switch outside the range of the specified voltage can cause not only malfunction and damage of the switch but also electrocution and fire.

2. **Do not exceed the maximum allowable load specification.**
   
   A load exceeding the maximum load specification can cause damage to the switch or shorten its operating life span.

3. **Do not use a load that generates surge voltage.**
   
   Although surge protection is installed in the circuit at the output side of the switch, damage may still occur if a surge is applied repeatedly. When a surge generating load such as a relay or solenoid is directly driven, use a type of switch with a built-in surge absorbing element.

4. **Since the type of applicable fluid varies depending on the product, be sure to verify the specifications.**
   
   The switches do not have an explosion proof rating. To prevent a possible fire hazard, do not use with flammable gases or fluids.

5. **Operate the switch within the regulating pressure range and maximum operating pressure.**
   
   Malfunction can occur if the pressure sensor is used outside the regulating pressure range, and the sensor may be permanently damaged if used at a pressure that is above the maximum operating pressure.

#### Warning

1. **If the equipment is not operating properly, do not continue to use it.**
   
   Connect air and power after installation, repairs, or modifications, and verify proper installation. The switch should be checked for proper operation and possible leaks.

2. **Mount switches using the proper tightening torque.**
   
   When a switch is tightened beyond the specified tightening torque, the mounting screws, mounting bracket, or switch may be damaged. On the other hand, tightening below the specified tightening torque may cause the installation screws to come loose during operation.

<table>
<thead>
<tr>
<th>Nominal thread sizes</th>
<th>Tightening torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>M5</td>
<td>1/6 rotation after tightening by hand</td>
</tr>
<tr>
<td>R 1/8, NPT 1/8</td>
<td>7 to 9 Nm</td>
</tr>
</tbody>
</table>

3. **Apply wrench only to the metal part of the main housing when installing the pressure switch onto the system piping.**
   
   Do not apply a wrench to the resin part as this may damage the switch.

### Wiring

#### Warning
1. **Verify the color and terminal number when wiring.**
   
   Incorrect wiring can cause the switch to be damaged and malfunction. Verify the color and the terminal number in the instruction manual when wiring.

2. **Avoid repeatedly bending or stretching the lead wire.**
   
   Repeatedly applying bending stress or stretching force to the lead wire will cause it to break. If you believe the lead wire is damaged and likely to cause malfunctions, replace it.

3. **Confirm proper insulation of wiring.**
   
   Make sure that there is no faulty wiring insulation (contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow into a switch.

### Operating Environment

#### Warning
1. **Never use in the presence of explosive gases.**
   
   The switches do not have an explosion proof rating. Never use in the presence of an explosive gas as this may cause a serious explosion.

### Maintenance

#### Warning
1. **Perform periodic inspections to ensure proper operation of the switch.**
   
   Unexpected malfunctions may cause possible danger.

2. **Take precautions when using the switch for an interlock circuit.**
   
   When a pressure switch is used for an interlock circuit, devise a multiple interlock system to prevent trouble or malfunctioning. Verify the operation of the switch and interlock function on a regular basis.
### Selection

**Warning**

1. **Monitor the internal voltage drop of the switch.**
   
   When operating below a specified voltage, it is possible that the load may be ineffective even though the pressure switch function is normal. Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

   \[
   \text{Supply voltage} - \text{Internal voltage drop of switch} > \text{Minimum operating voltage of load}
   \]

**Caution**

1. **Data of the digital pressure switch will be stored even after the power is turned off.**
   
   Input data (set pressure, etc.) will be stored in EEPROM so that the data will not be lost after the pressure switch is turned off. (Data will be stored for up to 100,000 hours after the power is turned off.)

### Mounting

**Warning**

1. **Operation**
   
   Refer to the instruction manual for the operation of the digital pressure switch.

2. **Do not touch the LCD indicator.**
   
   Do not touch the LCD indicator face of the pressure switch during operation. Static electricity can change the readout.

3. **Pressure port**
   
   Do not introduce any wire or similar object to a pressure port as this may damage the pressure sensor and cause a malfunction.

### Wiring

**Warning**

1. **Do not wire in conjunction with power lines or high voltage lines.**
   
   Wire separately from power lines and high voltage lines, avoiding wiring in the same conduit with these lines. Control circuits including switches may malfunction due to noise from these other lines.

2. **Do not allow loads to short circuit.**
   
   Although digital pressure switches indicate excess current error if loads are short circuited, all incorrect wiring connections cannot be protected. Take precautions to avoid incorrect wiring. As for other pressure switches, the switches will be instantly damaged if loads are short circuited. Take special care to avoid reverse wiring between the brown power supply line and the black output line.

3. **Connect a DC(--) wire (blue) as close as possible to the DC power supply GND terminal.**
   
   Connecting the power supply away from the GND terminal can cause malfunctions due to noise from devices that are connected to the GND terminal.

4. **Do not attempt to insert or pull the pressure sensor or its connector when the power is on.** A switch output malfunction may occur.

### Air Supply

**Warning**

1. **Use the switch within the specified fluid and ambient temperature range.**
   
   Ambient and fluid temperature operation is as follows:
   - Digital pressure switches: 0°C to 50°C
   - Other pressure switches: 0°C to 60°C
   
   Take measures to prevent moisture from freezing in circuits when below 5°C, since this may cause damage to the O-ring and lead to a malfunction. The installation of an air dryer is recommended for eliminating condensate and moisture. Never use the switch in an environment where there are drastic temperature changes even when these temperatures are operated within the specified temperature range.

2. **Vacuum switch**
   
   An instant pressure pulse of up to 500kPa (0.5MPa) (at the time of vacuum release) will not affect the performance of the switch. However, a constant pressure of 200kPa (0.2MPa) or more should be avoided.

### Operating Environment

**Warning**

1. **Do not use in an area where surges are generated.**
   
   When there are units that generate a large amount of surge in the area around pressure switches (e.g., solenoid type lifters, high frequency induction furnaces, motors), this may cause deterioration or damage to the switches' internal circuitry. Avoid and protect against sources of surge generation and crossed lines.

2. **Operating environment**
   
   In general, the digital pressure switches featured here are not dust or splashproof. Avoid using in an environment where the likelihood of splashing or spraying of liquids (water, oil, etc.) exists. If used in such an environment, use a dustproof and splashproof type switch.

### Maintenance

**Caution**

1. **Cleaning of the switch body**
   
   Wipe off dirt with a soft cloth. If dirt does not come off easily, use a neutral detergent diluted with water to dampen a soft cloth. Wipe the switch only after squeezing the excess water out of the dampened cloth. Then finish off by wiping with a dry cloth afterwards.
## Handling

**Warning**
1. Do not drop, bump, or apply excessive impacts (980m/s²) while handling. Although the body of the sensor may not be damaged, the internal parts of the sensor could be damaged and lead to a malfunction.
2. The tensile strength of the cord is 35N. Applying a greater pulling force on it can cause a malfunction. When handling, hold the body of the sensor—do not dangle it from the cord.
3. Do not exceed the screw-in torque of 7 to 9 N·m when installing piping. Exceeding this value may cause malfunctioning of the sensor.
4. Do not use pressure sensors with corrosive and/or flammable gases or liquids.

## Connection

**Warning**
1. Incorrect wiring can damage the switch and cause a malfunction or erroneous switch output. Connections should be done while the power is turned off.
2. Do not attempt to insert or pull the pressure sensor or its connector when the power is on. A switch output malfunction may occur.
3. Wire separately from power lines and high voltage lines, avoiding wiring in the same conduit with these lines. Malfunctions may occur due to noise from these other lines.
4. If a commercial switching regulator is used, make sure that the F.G. terminal is grounded.

## Mounting

**Caution**
1. Mounting with panel mount adapter
   - Mount a bracket to the body using two M3 x 5L mounting screws and install on piping with hexagon socket head cap screws. The switch can be installed horizontally depending on the installation location.

   ![Mounting Diagram]

   - Tightening torque for bracket mounting screw should be 0.5 to 0.7N·m.

2. Mounting with bracket
   - Mount a bracket to the body using two M3 x 5L mounting screws and install on piping with hexagon socket head cap screws. The switch can be installed horizontally depending on the installation location.

   ![Mounting Diagram]

   - Tightening torque for bracket mounting screw should be 0.5 to 0.7N·m.

## Operating Environment

**Warning**
1. Our pressure switches are CE marked; however, they are not equipped with surge protection against lightning. Lightning surge countermeasures should be applied directly to system components as necessary.
2. Our pressure switches do not have an explosion proof rating. Never use in the presence of an explosive gas as this may cause a serious explosion.
