(*) Live parts of these switches are protected against the penetration of dust and water. However, when installing take all necessary precautions to prevent the penetration of solid bodies, or liquids with a high dust content, into the actuator aperture. Not recommended for use in saline atmospheres.

### Complementary characteristics

Not shown under General characteristics (page 3/19)

- **Actuation speed**
  - Maximum: 0.5 m/s, minimum: 0.01 m/s

- **Resistance to forcible withdrawal of actuator**
  - XCS B and XCS C: 1500 N; XCS E: 2000 N

- **Mechanical durability**
  - XCS A and XCS E: > 1 million operating cycles
  - XCS B and XCS C: 0.6 million operating cycles

- **Maximum operating rate**
  - For maximum durability: 600 operating cycles per hour

- **Minimum force for extraction of actuator**
  - > 20 N

- **Cable entry**
  - XCS A, XCS B, XCS C: 1 cable entry
  - XCS E: 2 cable entries
  - Entries tapped for 1/2” NPT (USAS B2-1) conduit

Schemes

Note: These schemes are given as examples only, the designer must refer to the relevant safety standards for guidance

Wiring to category 1 conforming to EN 954-1/ISO 13849-1

Example with 3-pole N/C + N/O + N/O contact and protection fuse to prevent shunting of the N/C contact, either by cable damage or by tampering.

Wiring to category 3 conforming to EN 954-1/ISO 13849-1

Example with 3-pole N/C + N/O + N/O contact with mixed redundancy of the contacts and the associated control relays. To activate K1, it is necessary to remove and re-insert the actuator when the supply is switched on.

(1) Signalling contact

H1: “actuator not inserted” indicator

Wiring to category 4 conforming to EN 954-1/ISO 13849-1. Wiring method used in conjunction with Preventa safety module

(The guard switch should be used in conjunction with a safety limit switch to give electrical/mechanical redundancy)

Method for machines with quick rundown time (low inertia)

Method for machines with long rundown time (high inertia)

Locking or interlocking device based on the principle of redundancy and self-monitoring.
The safety modules ensure these functions.

Locking of actuator and operation in positive mode associated with a safety module.

Interlocking device for actuator fitted on guard and zero speed detection.
